

The Ebury Way

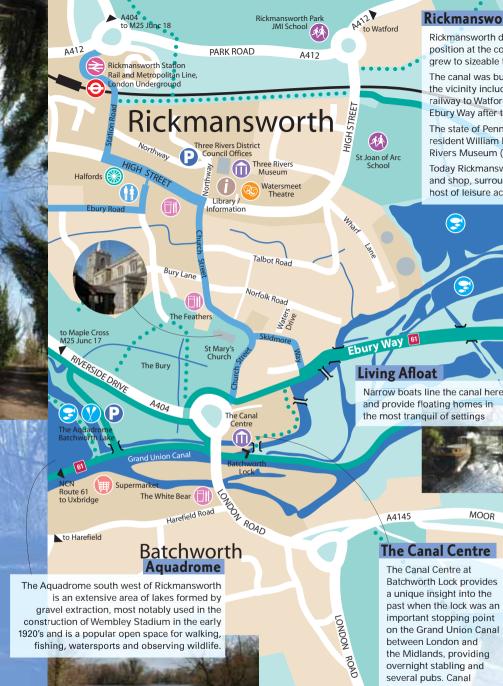

The Ebury Way is a 3.5 mile trafficfree path for walkers & cyclists along the route of a former railway line linking Watford and Rickmansworth.

By bike it is a 30 minute easy ride, for the more adventurous it forms part of route 61 of the National Cycle Network which runs west to Uxbridge & Windsor and beyond. and from Watford Route 6 goes from London to the Lake District!

The surface has been designed to be easy going for all users including wheelchairs, with many accessible entry points along the way.

Acting as a 'green corridor' for wildlife and well away from the bustle of nearby towns and traffic the route passes through a variety of habitats, including open moor, scrubby wood, wetlands and water.

Crossing the 3 rivers - Colne, Chess & Gade and the Grand Union Canal. there is plenty to see along the way.

Rickmansworth

Rickmansworth dates back to Saxon times and with its prominent position at the confluence of the 3 rivers Chess, Gade & Colne grew to sizeable town gaining its royal charter in 1542.

The canal was built in 1797, and many businesses sprang up in the vicinity including 5 paper mills & a brewery. Later came the ailway to Watford built by Lord Ebury in 1862 becoming the Ebury Way after the line finally closed in 1981.

The state of Pennsylvania USA is named after a famous former resident William Penn who lived in Basing House - now Three Rivers Museum (see right).

Today Rickmansworth is an attractive thriving place to live work and shop, surrounded by delightful countryside that provides a host of leisure activities.

Fishing Lakes

Angling is a popular sport on many of the lakes on either side of the Ebury Way, Club membership is required - see back cover for information.

From the Air

You can see the Metropolitan Line crossing the River Gade & Canal in the centre. The Ebury Way is visible as a line of trees running from bottom left, alongside the fishing lake, under the railway, and beside the industrial area at top right.

Croxley Common Moor Nature Reserve Site of Special Scientific Interest

> Moor Lane Crossing

Croxley Common Moor

This 100 acre nature reserve and SSSI provides a wonderful habitat for wildflowers and many bird species including the Green Woodpecker.

A stroll across the moor, which commonly provides grazing for cattle, brings you to the banks of the tranguil River Gade where kingfishers are a common sight. Look out for ant hills in the grass - a sign that most of the moor has never been ploughed or fertilized.
